Accessibility Statement

Effective: November 8, 2026 • **Version:** 2026-11-08 • **Service:** SpendLeak

This document describes the conditions under which SpendLeak is offered and should be read together with the other policies published through the Service. The actual service operator and monitored legal contact are identified on SpendLeak's legal information page.

1. Accessibility objective

SpendLeak aims to provide readable text, keyboard-operable controls and layouts that adapt to different screens. This statement describes the product's accessibility objective rather than a certified compliance status. No independent WCAG audit or accessibility certification should be inferred solely from this document.

2. Known areas for improvement

Financial tables, charts, complex imports and authentication flows can create barriers for screen-reader and keyboard users. The operator should test focus order, accessible names, status announcements, colour contrast, zoom, reduced-motion preferences and non-pointer navigation in real browsers before claiming a particular WCAG level.

3. Alternative access and feedback

If you encounter a barrier, contact the verified support address with the page, device or assistive technology involved and the task you were trying to complete. Avoid including passwords or sensitive financial records in an initial report. Where reasonable, the operator should offer an accessible alternative or explain a safe workaround while a defect is investigated.

4. Ongoing evaluation

Accessibility should be considered during design reviews and automated tests, supplemented by manual assistive-technology testing. Material changes to registration, data import, findings and reports should be included in accessibility regression checks. The statement will be revised to describe results of verified assessments when available.
